Slim, Compact Display offers Durable Touch Solution

MicroTouch™ ChassisTouch FPD monitors from 3M are designed for easy integration into kiosks, industrial enclosures and other installations where compact, touch-integrated displays are preferred. ChassisTouch FPD monitors offer a more compact enclosure, better optics, lower power usage, longer life and less heat generation than CRT chassis monitors. These slim profile monitors are ideal for use in a broad range of kiosk and light industrial applications.

When design space is limited, the slim metal case of the ChassisTouch FPD touch monitor is ideal. Back-mounted display controls are accessible even with the monitor sitting flush with the face of the enclosure, improving the aesthetics of your integration. An optional bezel (user installable) is available for applications requiring a more finished appearance.

Making the Difference

The ChassisTouch FPD touch monitors are available with MicroTouch™ ClearTek capacitive touch screen technology. Capacitive technology has a proven track record of durability and reliability in heavy usage applications. A ClearTek sensor with Industrial (C) Etch has been tested in a laboratory environment to withstand over 225 million mechanical touches without noticeable degradation to the surface.*

* Mechanical touches for *capacitive* were tested on a single x,y location and for *resistive* were tested on a single 1cm location, each using a finger-like stylus of 45 durometer, "A" shore hardness, 0.5 diameter with a load of 0.46 pounds, +/- .01 pounds of force.
