

The smallest all-in-one wireless payment device in the world.

VeriFone's V^x 670 is hands-down the smallest all-in-one wireless payment device in the world. Built with the end-user in mind — through our Purpose Inspired Design program — the V^x 670 changes everything. Designed to be the center of attention, the stylish V^x 670 is perfect for restaurants, bars, car rental companies, and similar merchants that need a customer-facing portable device. Our compact, ergonomic design means the V^x 670 can be carried to the point of service and handed to a customer for PIN entry quickly and conveniently.

With VeriFone's patent-pending MAXui design, all the features you desire most are packed in the smallest possible footprint. Featuring a surprisingly large high-contrast, white backlit display and oversized blue backlit keys, the V^x 670 is easy to use under any lighting conditions. Its tapered design fits comfortably even in the smallest hands, and its rugged, drop-resistant, spill-resistant case holds up in the most demanding environments. A lightning-fast processor and Wi-Fi connection streamline debit, credit, EBT, and value-added transactions such as gift card or loyalty — with data safeguarded by the latest security protections. In addition, a hidden, whisper-quiet thermal printer with dual-tear bar produces receipts in seconds to get your customers on their way.

The V^x 670's standard base provides an ideal place to leave the device for charging between uses. And an optional deluxe base station also features a spare battery charger, USB ports, and dial capability. In addition, quick-change, long-life batteries will keep your staff going, even on the busiest days.

BENEFITS AT A GLANCE

- Revolutionary wireless design
- Remarkably easy to use
- Impressive performance meets incredible functionality
- Unprecedented security

Features & Benefits

Revolutionary Wireless Design

- Designed through our Purpose Inspired Design program specifically for customer-facing, handheld payment featuring Wi-Fi connectivity
- Sleek and stylish with an ergonomically balanced midpoint, the design minimizes the chance of dropping and is easy to hand over to customers for PIN entry
- MAXui interface design provides a large high-contrast, white backlit display and ample keypad area with blue backlighting and improved tactile response
- Rounded corners and impact resistance to three feet on hard floor minimize breakage

Remarkably Easy to Use

- Vertical mag-stripe card reader with contoured blade increases read rate
- Optional holster easily fits onto employee's belt to keep hands free
- Proven V^x Solutions and industry-leading ServPOS or SoftPay software provide a flexible, familiar environment and minimize training

Impressive Performance Meets Incredible Functionality

- Powerful processor handles transactions in seconds, not minutes, so customers can pay and go
- High-capacity 7.2 volt 1800 mAh lithium-ion battery can be quickly swapped with one hand
- Optional full-feature base with spare battery charging also contains back-up dial connection and two USB ports for use with VeriFone USB peripherals

Unprecedented Security

- PCI approval ensures compliance with the most stringent security standards
- Industry benchmark WPA Wi-Fi security
- Other security protections include tamper-resistant construction, end-to-end SSL protocols, and VeriShield file authentication

The V^x 670's sleek, all-in-one design makes it easy to hand over to customers for PIN entry.

The high-speed thermal printer with dual-tear bar and 38 mm paper roll is quiet and fast — getting receipts into customers' hands quickly.
